In the time it takes you to reset your employees' passwords, you could have...

If you have the sneaking suspicion

that you’re spending too much time resetting passwords for employees, **you’re onto something.**

The average IT professional spends

10

hours

each year on this task

That’s a lot of hours!

Here are a few things you could have done with those **10 extra hours:**

1 Watched the entire first season of Game of Thrones

Do you have that one friend who keeps pestering you to watch GoT?

With 10 extra hours, you could finally find out what the hype is all about.

2

Flown from Los Angeles to Dublin, Ireland

Yearning for a proper pint of Guinness?

You could make the trek from LA to Ireland in the time it takes you to reset all those employee passwords.

3

Listened to 10 episodes of your favorite podcast

NYTimes Tech Talk?
Darknet Diaries?

With ten more hours to listen, you could squeeze them all in.

4

Run a marathon – twice!

The average person

needs between four and a half to five hours to run a marathon. **In the time it takes you to handle all those password changes, you could run not just one, but two marathons!**

5

Driven from Chicago to Washington D.C.

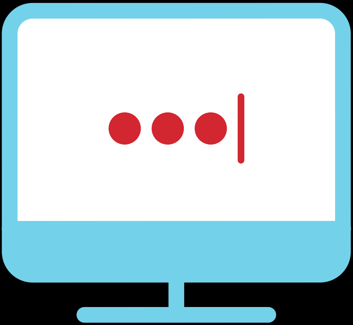
Craving a deep dish

pizza and then a stroll through the National Mall?

You could make an epic road trip from the Second City to the nation's capital in 10 hours.

With a password manager, you don't need to waste precious time on rote admin asks like resetting passwords.

You can make sure employees are using secure passwords and sharing them safely.



Get the time back and get on with your workday with LastPass.
